David R. Ansolabehere, General Manager

**October 24, 2023**

**Cawelo Water District Landowners:**

To facilitate better water management throughout the District, Cawelo Water District will implement a Winter Supplemental Water program to landowners at a cost below the standard water toll rates. However, water from the Winter Supplemental Water program must be pre-paid. If ordered and pre-paid, this water will not count against your annual allocation of irrigation water. **If Winter Supplemental Water is not purchased (pre-paid), water used during this program period will be deducted from your annual allocation of irrigation water at the time of use.**

**Winter Supplemental Water for 2023-2024 may be used November 1, 2023, through February 29, 2024.** Winter Supplemental Water that has been ordered and pre-paid and that is remaining after this period has ended will be refunded at the purchased price. **Winter Supplemental Water cannot be carried** over outside of the designated use period.

The theory behind this program is to best utilize winter water that is available to the District and to benefit landowners by providing inexpensive water that will not count against their allocation. Our goal is to turn off wells by providing the opportunity to use this Winter Supplemental Water in an attempt to help the ground water basin recover from pumping periods. The District is providing this low cost of blended water to landowner throughout the winter period to assist in water management.

**PLEASE NOTE:** Water for this program is Oilfield Produced water blended with water from District supplies. The Winter Supplemental Water may be blended approximately 0.5:1 (Surface/Groundwater to Oilfield Produced Water), and **water quality constituent levels could be greater than 0.70 ppm Boron, 110 mg/l Chloride and 130 mg/l Sodium.** The District is reducing the amount of blending in an attempt to reduce the stress on the groundwater wells in the winter months so the wells will be ready for the heavy load that will be required of them in the spring and summer months.

Winter Supplemental Water supplies are limited based on the Oilfield Produced water imported and the available district blend water. **If ordered, the cost of Winter Supplemental Water is \$42 per acre foot.**

If you would like to purchase Winter Supplemental Water, please return the attached Winter Supplemental Water form stating your requested supplies in acre feet with payment **as soon as you want to begin taking the Winter Supplemental Water.**

**Payment must be received prior to delivery of water, or the amount of water used during this period will be deducted from your annual allocation of irrigation water.**

Due to limited amount of Winter Supplemental Water, available flows may be allocated on a per acre basis depending on the amount of Winter Supplemental Water requested by Landowners.

Sincerely,

David R. Ansolabehere,  
General Manager
